

S-LDSC across GWAS traits: Open DARs

Color: coefficient Z-score; * FDR<0.05, ** FDR<0.01, *** FDR<0.001; BH-FDR across GWAS traits separately within each cell type. Color scale clipped at 4; n_snps >= 100

Open DARs annotation and number of common SNPs

Red = positive coefficient, blue = negative coefficient, white = coefficient Z = 0. Stars indicate positive enrichment after BH-FDR correction across GWAS traits separately within each cell type and within the current DAR set
