## BSk20\_model1\_AP\_G0-G4\_nspots (FDR=5%; Expr.Quantile=50th)

BSk20\_model1\_AP\_G0-G4\_nspots (FDR=5%; Expr.Quantile=50th)

Volcano plot showing differentially expressed genes. The y-axis represents  $-\log_{10} P$  (ranging from 0 to 20) and the x-axis represents  $\log_2$  fold change (ranging from -1 to 1). A horizontal dashed line at  $-\log_{10} P \approx 1.3$  and two vertical dashed lines at  $\log_2$  fold change  $\approx \pm 0.6$  define the significance threshold. Genes are labeled with arrows pointing to their data points. LINC00632 is the most significant upregulated gene. Other labeled genes include PLCG2, MAN1A2, PFDN4, MPP6, CHGB, CSRNP3, NSA2, C5orf63, CD74, TTR, MTRNR2L1, FI27, BPTF, ATN1, XIST, CNDP1, CARNS1, HHATL, and AL627171.2.
