
positive regulation of DNA−templated transcription
positive regulation of RNA biosynthetic process
positive regulation of RNA metabolic process
glial cell differentiation
glial cell development
positive regulation of nucleobase−containing compound metabolic process
transcription by RNA polymerase II
regulation of nucleobase−containing compound metabolic process
positive regulation of RNA biosynthetic process
glial cell differentiation
gliogenesis
astrocyte development
positive regulation of transcription by RNA polymerase II
regulation of RNA metabolic process
regulation of metabolic process
regulation of DNA−templated transcription
regulation of transcription by RNA polymerase II
metabolic process
regulation of RNA biosynthetic process
astrocyte differentiation
astrocyte activation
cellular response to stress
regulation of cellular response to stress
positive regulation of protein catabolic process
developmental growth
negative regulation of catalytic activity
cellular response to stress
inflammatory response
DNA damage response
positive regulation of lipid transport
neuromuscular junction development
regeneration
