

glutamatergic synapse

The diagram illustrates a synapse, a junction between two neurons. It is divided into three main regions: a presynaptic terminal (top left, pink), a synaptic membrane (bottom, orange), and a postsynaptic terminal (top right, red). The presynaptic terminal contains a 'glutamatergic synapse' label. The synaptic membrane is labeled 'synaptic membrane'. The postsynaptic terminal is labeled 'synapse'. A vertical line separates the presynaptic and postsynaptic regions, and a horizontal line separates the synaptic membrane from the terminal regions.
